**Attachments:** Updated Preliminary Workshop Agenda 040114.docx

Paul:

Thanks. Sorry, I did not get around to responding sooner. I thinking we have covered the various points you had raised in the workshop questions (attached). The structure of the workshop now is that speakers' presentations have to be geared towards addressing those specific questions. We could not express too much detail, otherwise the questions would have gotten rather wordy. However we will have an opportunity to guide the speakers further in a conference call we will have with them. Hecht declined but someone else from his lab is considering. Kenny has accepted.

Ravi.

**Subject:** FA workshop - focus and articles

I've been somewhat out of touch on this project – I'm not sure what discussion followed the text I shared some weeks ago on key science items.

So not sure just what emphasis is, what the specific skills are of experts are that coming, and what individuals are being asked to cover. I thought that we wanted panelist that would critically examine methods and data that have been put forward as addressing what has been described as "endogenous FA". To that regard, the papers by Heck, Swenberg's lab, Hecht's lab, kleinnijenhuis and related are examples of the papers that should be critically examined by our experts – bringing in other information that the experts hopefully have knowledge of and can bring in additional literature to support. That is these papers should be the subject matter for evaluation and not the source matter for the evaluation...

## Ex. 5 Deliberative Process (DP)

**Subject:** RE: 5 Articles needed for sending to Formaldehyde Workshop Invitee

Thanks, Sury. As long as we can get them to her tomorrow--- this is meant to be a quick and easy effort (i.e., no meetings, etc.)

Andrew,  
Few more. These include articles from Shaham et al and Zhang et al. and one from Steve Hecht's group. Between me, Ravi and Paul, we can discuss and decide on the papers to pick.

**Subject:** 5 Articles needed for sending to Formaldehyde Workshop Invitee

Hello Ravi, Paul, and Sury.

ICF has invited Lisa Peterson ([http://www.pharmacy.umn.edu/faculty/peterson\\_lisa/](http://www.pharmacy.umn.edu/faculty/peterson_lisa/)) to be a speaker in Session 1 at the upcoming formaldehyde workshop (I have attached the agenda as a refresher). Lisa has expressed some concern regarding what she would be asked to speak on, and the level of effort preparations would require. The other 2 speakers for this session are already confirmed.

As we have already done for an invited epidemiologist, we suggested that we could collect 4-6 papers that introduce the spectrum of the methods and data that this session will focus on... in particular, those studies applicable to her field of expertise. As necessary, we can also send papers that are not specific to formaldehyde which describe in more detail the methodology used in the formaldehyde studies.

As the 3 of you are familiar with the database and it's issues, can you please provide 4-6 papers that we can forward to Lisa? As these last stages of workshop planning are time-sensitive, we agreed to send the papers to Lisa **by COB Wednesday (04/02)**, so the sooner the better; Lisa will let us know whether or not she can participate by this Thursday morning.

Thanks in advance,  
Andrew
